

**Abstract:**

The proposed system is web based application named as 'Human Resource Management System' .It consists of functionally related GUI (application program) and database. It maintains the information about the personal details of their employees. The application is actually a suite of applications developed using Django framework. It is simple to understand and can be used by anyone who is not even familiar with simple employee's system. It is user friendly and just asks the user to follow step by step operations by giving him few options. It is fast and can perform many operations of a company or organization. This software project has been developed using the powerful coding tools of HTML, CSS as front end and Django as backend and Postgres Server for database. The software is very user friendly. The project contains modules like Employee and Admin. This version of the software has multi-user approach.
