NHPC No:

Approved By:

.....
Lt.Col. Dr. Kavita
karmacharya
MBBS, MD Pathology
NMC No.:5081
On:2020-11-15
10:12:33

Note:

- o The results relate only to the specimen tested and should be correlated with clinical findings.
- o Repeat sampling and testing of lower respiratory specimen is strongly recommended in severe progressive disease.
- o The repeat specimen is recommended to collect at least after 5 days of gap of first sample collection for additional testing if required.
- o A positive result does not necessarily rule out other co-infections.
- o Please note that these results are not to be used for any publication without prior permission from concerned authority.
- o Negative result does not exclude the possibility of CoVID-19 infection & should not be used as the only criteria for treatment or patient management decisions. Presence of inhibitors, mutations & insufficient RNA can influence the results.
